

# WeaverPRM™

## Information Management for Noise Mitigation Programs

### Overview:

Bringing in-depth, detailed tracking and management capabilities to airports, local, and state agencies for noise mitigation programs, WeaverPRM integrates project tracking, dwelling, and homeowner information into a web-based software system designed to help organize and manage noise mitigation activities.

A product of The Jones Payne Group

With its easy-to-use, web-based interface and flexible design, WeaverPRM offers access to the information that is key to your ability to manage your noise mitigation program. Incorporate spreadsheets, databases, financial information, and homeowner correspondence into WeaverPRM for streamlined and organized project management.

The system's modules, dashboards, reports, maps, and functions can provide multiple views of workflow for properties and project data, helping to:

- Inventory land; using parcels, buildings, units, and people.
- Track projects, grants, and construction.
- Manage communication with homeowners via laptop, PDA, or Smartphone.
- Create reports for the activities of administrating sound insulation projects.
- Obtain a house-by-house perspective of the RSI project's progress.
- Assess project status and answer grant

application questions.

- Track where homeowners are within the production cycle.
- Maintain a history of homeowner interactions and documents.
- Build a database of homeowner issues and resolutions useful for planning future projects or training new staff.
- Produce reports, charts, and maps to communicate RSI program status to superiors, the FAA, collaborating agencies, and the public.

### What WeaverPRM Can Do for You

- Land inventory and reuse planning
- Project, grant, and construction tracking
- Homeowner communication management
- Reporting and document management
- Construction and warranty tracking
- Interfaces with GIS and mapping systems
- Project administration
